Convio Web Services Release 1.0

Version 1.10 of Convio Web Services is now available. Please see release notes below for further details on what is included in this release.

Release Notes

This release consists primarily of fixes for customer-reported defects in Convio Web Services interface which are summarized below.

The following types have been added (Bug #49988):

- o **ApplicationSurveyResponse**

The following enumerated types have changed (Bug #50225):

The **CreditCardType** enumeration adds the following values:

- o ACH
- o PAYPAL
- o AMAZON
- o GOOGLE
- o BILLMELATER

The **TenderType** enumeration adds the following value:

- o XCHECKOUT

The online Convio Web Services Documentation has been updated to reflect the changes in this release.

Defect Fixes

Bug #49988 – Previously TeamRaiser Event survey responses were not being returned by queries on the **SurveyResponse** type. This release adds an **ApplicationSurveyResponse** type which may be queried to return survey responses associated with TeamRaiser event registrations and certain other application objects.

Bug #50225 – **CreditCardType** and **TenderType** enumerations have been updated.

Bug #50424 – Previously the online documentation of the soapUI sample project was missing steps required in the latest version of the soapUI tool to configure the project's service endpoint. These steps have been added.

Bug #50429 – As of the previous release (CWS 1.9) the **AcceptsEmail** field of the **Constituent** record became a read-only field (#47461). This field may now be set **FALSE** using the **Update** operation. The field may only be set **FALSE**. Attempting to change this field from **FALSE** to **TRUE** will result in an error being returned.
