Convio Web Services Release 1.11

Version 1.11 of Convio Web Services is now available. Please see release notes below for further details on what is included in this release.

Release Notes

This release consists primarily of fixes for customer-reported defects in Convio Web Services interface which are summarized below.

The following types have been added (Bug #51530):

- **CenterMember**

The **CenterMember** type supports a limited **Update** method, allowing the constituent's email opt-in preference for the center to be changed from "True" to "False," opting the constituent out of email for the center.

The following types have been changed (Bug # 52683):

- **CustomNumber*** in **Constituent** type is changed from "decimal" to "integer" to correctly reflect the underlying data type in the Constituent record.

The following fields have been added (Bug #51415):

- **AccountingCode** field is added to the **CalendarEvent** type.

The online Convio Web Services Documentation has been updated to reflect the changes in this release.

Defect Fixes

Bug #52970 —A button has been added on the "Monitor" page in the Convio Web Services Console that can be used to refresh the WSDL following any changes to the Constituent360 Database Configuration.

Bug #51370 — Queries returning **InterestId** from **Constituent** type previously returned the default center-specific interests for all constituents, whether the constituent was a member of the center or not. This is now corrected.

Bug #52377 — Previously queries against **Recurring Payment** only returned one row when the type had multiple transactions associated with it. Now all transactions are returned.
