Convio Web Services Release 1.12

Version 1.12 of Convio Web Services is now available. Please see release notes below for further details on what is included in this release.

Release Notes

This release consists of fixes for customer-reported defects and schema updates in support of new data fields in Convio Luminate Online Summer 2011 release which are summarized below.

The following fields are added to the **Payment** type:

- **RoutingNumber** – the ACH Routing number
- **TransitNumber** – the ACH transit number (Canada)
- **BankNumber** – the ACH bank number (Canada)
- **AccountType** – the ACH account type: CHECKING (default), SAVINGS
- **AccountNumber** – the ACH (debit) account number
- **OriginationType** – indicates how the payment was entered: ONLINE, entered by a consitituent or administrator online; API_INTERNAL by internal API call (originating from the Convio site); API_EXTERNAL by API call originating elsewhere; CRM, entered by an administrator in Luminate CRM.

The following fields are added to the **TeamRaiserEvent** type:

- **LocationName** – the event location name or venue
- **LocalOfficeAttn** – the attention line for local office mailing address
- **LocalOfficeAddress** – the local office mailing address

The following fields are added to the **TeamRaiserRegistration** type:

- **IsAnonymous** – Indicates whether the participation is anonymous (does not appear in public lists or searches).
- **ScreenName** – the participant's screen name.

The following field is added to the **ApplicationSurveyResponse** type:

- **QuestionKey** – an administrator-entered key by which the survey response may be cross-referenced to responses to other instances of the same question; this field is currently implemented only for TeamRaiser registration surveys, and is disabled by default.

The online Convio Web Services Documentation has been updated to reflect the changes in this release.

Defect Fixes

Bug #54611 — Previously, querying **Constituent** for certain **InterestId** values could fail due to SQL invalid number errors. This issue has been fixed.

Bug #51692 — Previously, appending a trailing slash / or subfolder name to the CWS console URL would result in a non-functional console displaying in the browser. This has been fixed.

Bug #55521 — Previously, Constituent.AnnualTransactionSummary.Year returned the year in decimal form, e.g. 2011.00. Year is now returned in the expected format.

Known Issues

Bug #56649 — Specifying a PageSize parameter for a GetIncrementalInserts, GetIncrementalUpdates, GetIncrementalDeletes operation that is different from the PageSize parameter specified for the previous corresponding GetIncrementalInsertsCount, GetIncrementalUpdatesCount, or GetIncrementalDeletesCount operation in a sync session results in unexpected behavior. If a larger PageSize is specified in subsequent calls, only the number of records specified in corresponding GetIncremental…Count call is returned. If a smaller PageSize=n is specified, only the first n records are returned for each Page resulting in records being skipped in the page sequence. To work around this issue, always specify the same PageSize for all GetIncremental* calls within the same sync session.
